

PRODUCT INFORMATION

RinseAid

Machine Dishwashing Rinse Aid

DESCRIPTION

RinseAid is an effective rinse aid used in machine dishwashers. RinseAid will assist in leaving dishes and cutlery sparkling and streak free.

FEATURES & BENEFITS

- Allows dishes and cutlery to drain sparkling even in hard water;
- Excellent rinsing properties and will leave plates streak free with a brilliant finish;
- Formulated for fast drying;
- Eliminate costly manual drying of dishes and therefore eliminates the use of tea towels that may lead to cross contamination;
- Safe on all metals.

USE DIRECTIONS

For best results the temperature of the rinse water should be between 80-85°C.

RinseAid is injected into the final rinse cycle water in dishwashers at a concentration of 1-2 mls per 20 litres of water.

There may be provision for rinse aid injection in your machine or alternatively it will be dispensed automatically by electronic feed unit. Please discuss with your sales representative/supplier.
